

TX200 Recovery Only A/C Refrigerant Management System - R-134a Unit for Non Automotive Applications Only

A high performance recovery-only machine at a competitive price...only RTI could have designed a machine like this. So much capability with so much performance!

The TX200 is a highly "mobile recovery only" unit that is durable and easy to use. It is designed for fast operation even at high ambient temperatures. Its light weight and small size make it perfect for difficult job site recoveries requiring high unit portability.

The TX200 was originally developed as a "recovery-only" machine designed for HVAC roof-top service. It is approved by EPA under Sections 608 and 609. Because the TX200 uses the same compressor and condenser as RTI's RHS 730/780 high performance line of machines, you know it is fast!

ACF-3000 Air Conditioning Flush System

A high performance air conditioning flush service system designed for today's modern A/C service operation!

The ACF-3000 cleans individual A/C system components by removing debris and dirt that can cause A/C system damage or failure. An A/C flush is a critical process that can prevent repeat repairs to an A/C system after a catastrophic failure by utilizing a closed-loop process to circulate flushing fluid through components to filter out contamination.

The ACF-3000 provides safe, effective and efficient flushing especially when used with RTI Super Flush Pro fluid. It is simple to operate, uses shop air and can be operated unattended

during the entire flush cycle. The ACF-3000 is designed to connect to the inlet and outlet ports of a vehicle's A/C heat exchanger, condenser or evaporator to flush each component separately. It utilizes a special ventilation method to provide optimum air quality during the flush procedure and a universal adapter kit is included for easy hook-up to a wide variety of components.
